Weekly Project Status Report (Week 2)

Project Name: BRIKKA (Commercial Building Lease Management System)

Independent Contractor: David Cho

Reporting Period: 2026-10-12 to 2026-10-18

Hours Worked: 15 hours this week | 15 hours month-to-date (out of 60-hour monthly cap)

Time Records Compliance: Compliant with Sections 4.2 and 4.3

Executive Summary

This week the team set up the shared development conventions and reviewed the database design against the updated Functional Requirements V1.5 (received 2026-10-07). A project-wide claude.md guideline, agent configuration, and shared-context (Hindsight) approach were established and discussed. Two independently drafted schemas were compared and reconciled, and the remaining open points were consolidated into a client question list (see Support Items). The GitHub repository blueprint and Jira epics were prepared and shared. The main dependency for next week is client clarification on 10 requirement points, four of which block the invoice-issuance logic.

This Week's Progress

Task / Deliverable	Details	Status	Notes
claude.md Guidelines Setup and Research	• Set up the Superpowers plugin to standardize codebase rules and the claude.md file with Claude skills • Discussed which agents to utilize project-wide (6 agents configured: spec-reader, schema-reviewer, ledger-auditor, calc-verifier, ui-spec-checker, spec-diff-analyst) • Discussed using the Hindsight method for better context management with the team	In Progr…	Target: 10/17 - 10/18

Task / Deliverable	Details	Status	Notes
	• More discussion needed on Design skills setup and Graphify usage		
Database Draft & Review	• Reviewed the updated V1.5 Functional Requirements together and discussed which parts of the database changed • Flagged the items that need to be discussed with the client to finalize the DB setup (see Support Items)	In Progr…	Target: 10/17 - 10/18
Github Setting & Sharing	• Configured the blueprint of the GitHub setting that contains the project-wide Claude setup (includes the .claude folder with skills and agents) • Shared repository access with the team	Comple…	Target: 10/17 - 10/18
Jira Setting & Sharing	• Divided Epics and Tasks based on the updated V1.5 Functional Requirements • More detailed review will be required within the team	Comple…	Target: 10/17 - 10/18

Upcoming Objectives

Item	Planned Work	Status	Target Start Date
Finalize Blueprint of project repo in GitHub (GitHub Setting + claude.md File Setup)	• GitHub setting to be finalized with project-wide agents, skills, and the Hindsight setting (for context sharing) • Onboard each team member (MCP, hooks, memory server)	In Progr…	Oct 12
Database Discussion	• v0.2 to be finalized after a few discussions with the client (clarifications listed under Support Items) • Set up development & staging DB with v0.2 in Supabase	In Progr…	Oct 12
Jira Detailed Review	• Review Epics / Tasks with the team and add acceptance criteria referencing spec section numbers	In Progr…	Oct 12

Risk Management

Type	Description	Impact	Status	Mitigation Strategy
N/A	No risks identified for this period.	N/A	N/A	N/A

Support Items

Requested From	Action Item / Request	Status	Needed By
Client	**1. Rounding of invoice totals (단수 처리) — apply or not?** Spec 4.2.6 / 4.7: confirmed in V1.0, marked undecided in V1.5. Example: An invoice totals 10,362,347 KRW (rent 7,700,000 + fixed fee 1,980,000 + electricity 682,347). With rounding, the invoice shows 10,362,300 and the 47 KRW is deducted from the lowest-priority item (electricity → 682,300). Without rounding, the tenant pays 10,362,347. **Our assumption:** no rounding until confirmed. Affects invoice issuance, payment matching, the mockup / June–July bank amounts, and tenant notification.	N/A	Before invoice-issuance development (Week 3)
Client	**2. Two payment accounts (rent / management fee) — how should payments be handled?** Spec 4.7, PRO-3, PAY-13, 4.3.1. Example: Building A has a rent account and a separate management-fee account. Tenant B owes 7,700,000 rent + 2,310,000 fees but transfers the full 10,010,000 into the fee account only. (a) Should the system still allocate 7,700,000 of it to rent? (b) Should the invoice show two account numbers (per item) or one total per account? (c)	N/A	Before invoice-issuance development (Week 3)

Requested From	Action Item / Request	Status	Needed By
	Will bank statements be uploaded per account or per building? **Our assumption:** allocation ignores which account was used; statements are uploaded per building.		
Client	**3. Deleting a charge item that has already been billed — allowed or not?** The spec conflicts: 03 §3.3 says "if ever billed, switch to inactive instead of deleting"; 05 PRO-3 says "items that have been billed can also be deleted." Example: "Elevator maintenance fee" was billed in July. In October the manager wants it gone from Building A's item list. Option A: mark inactive (hidden from new settlements, history intact). Option B: delete (removed from the list; past invoices keep the item name). **Our assumption:** Option A (inactive only), following the global rules over the screen spec.	N/A	Before building-settings development
Client	**4. Business registration number uniqueness — per operator or system-wide?** Spec 10 §6.12 says system-wide; 11 §7.2.2 says operators are isolated. Example: Tenant "Hanbit Co." (reg. no. 123-45-67890) leases in a building managed by Operator X and another managed by Operator Y.	N/A	Before tenant / landlord development

Requested From	Action Item / Request	Status	Needed By
	Per-operator: each operator registers Hanbit separately and never sees the other's data. System-wide: one Hanbit record shared across operators (operators could infer each other's tenants). **Our assumption:** per operator (data isolation first).		
Client	**5. Late-fee full waiver — record the waived amount, or only the date?** Spec 4.7: undecided. Example: A tenant paid June rent 31 days late; the late fee is computed as 2,615 KRW. The manager waives it entirely. Option A: store "2,615 KRW waived on 7/31" (visible in history and reports). Option B: store only "late fees settled through 7/31." **Our assumption:** the schema can store the amount; it will not be shown on screens until confirmed.	N/A	Before payment-processing (PAY-2) development
Client	**6. First meter reading of a new meter — where does the "previous value" come from?** Spec 2.8: previous value = previous round's current value; no rule for the first round. Example: A new electricity meter is installed in Unit 301 on 8/1 showing 1,774.40. At the August settlement there is no previous round. Should the manager enter 1,774.40 as an "installation baseline," or	N/A	Before settlement (PAY-10) development

Requested From	Action Item / Request	Status	Needed By
	enter both previous and current values that month? **Our assumption:** installation baseline entry (no settlement round).		
Client	**7. Move-out settlement invoice in the same month as a regular invoice — can both exist?** Spec 4.2.3, 4.1.9. Example: The October invoice is issued on 10/19 (rent 7,000,000). Termination is confirmed on 10/25 with move-out on 10/25. Is the 6-day difference handled only through the deposit refund (one invoice for October), or as a second "move-out settlement" invoice for October? **Our assumption:** one valid regular invoice per contract per month, plus at most one move-out settlement invoice per contract.	N/A	Before contract-termination (CTR-3) development
Client	**8. Allocation priority of ad-hoc charges (추가 청구) — keep 99 (same as late fees)?** Spec 4.3.1 / 4.7. Example: September invoice: rent 7,700,000 (priority 1), fixed fee 1,980,000 (priority 2), elevator usage fee 300,000 (ad-hoc, priority 99). The tenant pays 9,000,000. With priority 99, rent is paid in full, the fixed fee receives the remaining 1,300,000 (680,000 short), and the elevator fee	N/A	Before payment-matching (PAY-13) development

Requested From	Action Item / Request	Status	Needed By
	stays fully unpaid. With a higher priority, the elevator fee would be paid before the fixed fee. **Our assumption:** 99 (paid last).		
Client	**9. Reduction (감액) on a tax-invoice item — is a corrected tax invoice (수정세금계산서) required?** Spec 4.7, CTR-3; needs tax-accountant confirmation. Example: The July water charge of 1,337,087 was reduced by 18,000 in October after the tax invoice had been issued. Does the system need to record or trigger a corrected tax invoice, or is that handled outside the system? **Our assumption:** handled outside the system for now (not modeled).	N/A	Before ledger-correction (CTR-3) development
Client	**10. Payment-reminder email timing (N days before the due date) — where is N set?** Spec 4.7, NTF-6. Example: A reminder goes to tenants who have not paid, N days before the due date. Should N be set per building (in the fee settings) or once for the whole system? **Our assumption:** not modeled yet.	N/A	Before notification (NTF) development
